Report

The biggest part of the UK - England has incredibly interesting history. So, it is not shocking that national museums and galleries are extremely popular places to visit.

Social statistics draws on rather interesting data. Visiting rates of art galleries had been increasing with amazing speed from 2013 to 2015. Especially from 2013 to 2015. In 2015 there were about two times more visits than in 2013. On the other hand, 2015 was awful for science museums. There were ~~more than two~~ about three times less visits than in 2013. ~~we can~~ I presume, that people's attitude to science museums is less respectively than to art galleries.

We can see that in 2013 the most popular place was "Science Museum" (3.8 mln) when the "British Museum" was not ~~even~~ even the most popular art gallery. But in 2015 "British Museum" became the most popular ~~the~~ museum in England with 5.1 mln visits and continued to be the best in 2014 with 5.6 mln. At the same time "Science Museum" became the less popular with only 1.3 mln visits. Another interesting comparison: 2013: "Tate Gallery" is the less visiting place with only 0.9 mln, but 2015 changed things: "Tate" became more ~~visiting~~ visiting than 2013th leader "Science Museum" with 1.9 mln and 1.3 mln visits substantially.

I can recommend art galleries to do everything just like they did last years because their visiting rates increasing every year. But science museums should change something: create new advertisement campaign or make breakthrough in exhibitions because their visiting rates can be higher.

To conclude, people like to visit different museums in England, but ^{visiting} last years had established situation when art galleries were far more popular than science museums.
